

MULTI-CONTRACTOR CLAIM SETS

On occasion, two different contractors will pay for the same billed services. These types of duplicate payments are a result of jurisdictional processing errors. To ensure that this type of duplicate payment is addressed in the Duplicate Claims System, special data fields and procedures have been incorporated.

1.0. DESCRIPTION OF A MULTI-CONTRACTOR CLAIM SET

A multi-contractor claim set contains potential duplicate claims processed by two or more contractors. A multi-contractor set, consisting of Responsible FIs 45 and 13, is shown in [Figure 11-6-1, Sample Multi-Contractor Claim Set](#) (on the following page). The resolution of multi-contractor claim sets requires coordination between/among the contractors involved. Multi-contractor sets always involve an erroneous payment because only one contractor is responsible for processing and paying for services within a jurisdiction at any given time. When two different contractors pay for the same billed service, it means that one or more of the claims in the set were erroneously processed and paid by a contractor who did not have processing jurisdiction.

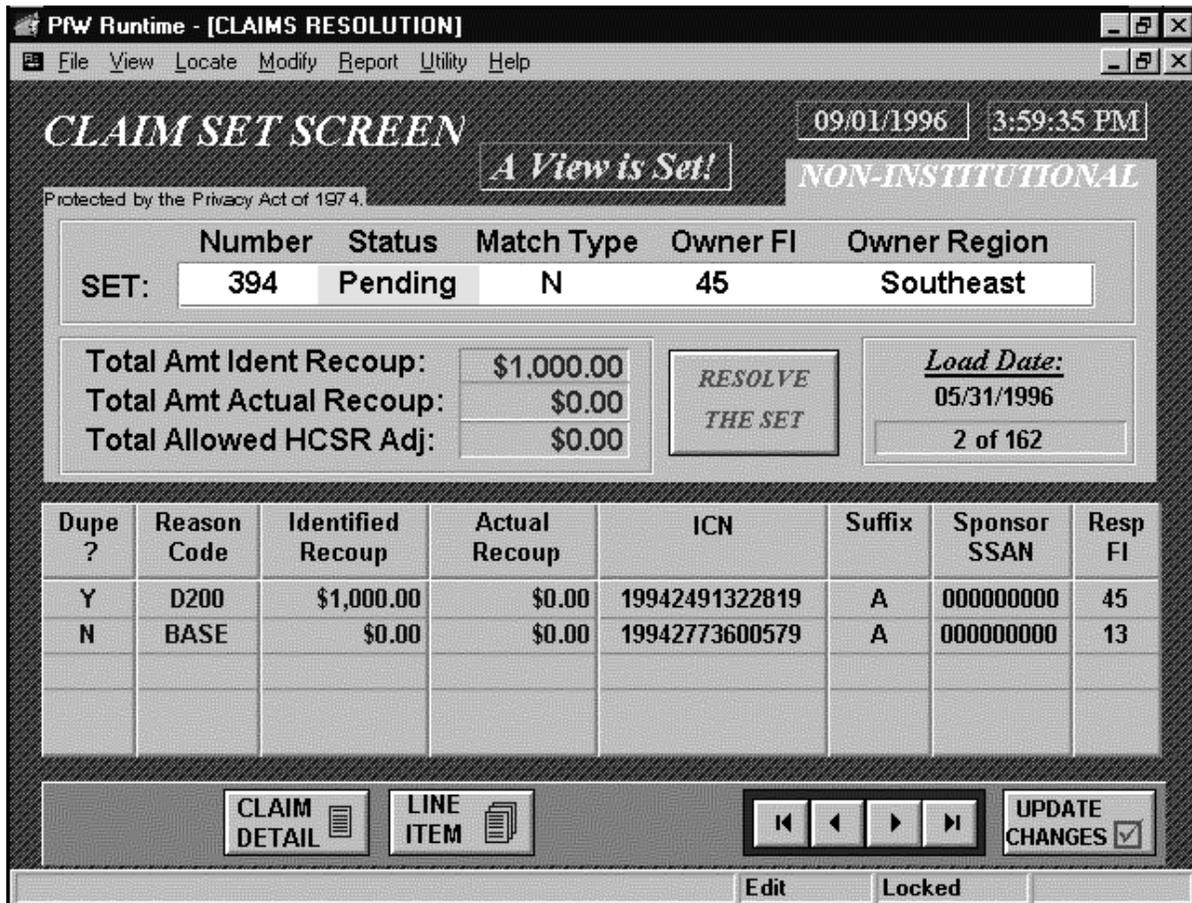

As with all other potential duplicate claim sets, the Duplicate Claims System assigns ownership of each set, i.e., responsibility for resolving the set, to the contractor who submitted the claim with the latest processed-to-completion date. This contractor becomes the Owner FI, who must research the claims in the set to verify that the appropriate Owner FI, i.e., the one without processing jurisdiction, was correctly assigned by the system. If the assigned Owner FI determines that his/her organization did not have processing jurisdiction for the claims in the set and, therefore, paid the claims in error, the Owner FI must resolve the duplicate situation. This means that his/her organization must remain as the Owner FI, indicate that a duplicate condition exists in the set, initiate recoupment of the overpayments, ensure receipt of the refunds/offsets, submit appropriate HCSR adjustments, and verify that these adjustments are reflected in the HCSR database.

If, however, the Owner FI determines that his/her organization had processing jurisdiction for the claims in the set and, therefore, the other/another contractor paid the claim(s) in the set in error, the current Owner FI may change ownership of the set to the other/another contractor for resolution.

Changing set ownership (i.e., the **Owner FI** field) is a function limited to multi-contractor sets. Ownership of other potential duplicate claim sets cannot be changed by a contractor. Only multi-contractor sets can be changed. The Owner FI change is restricted to those contractors (Responsible FIs) who processed claims in the set or are responsible for claims transferred in a contract transition. See [Section 7, Mass Change Function For Contract Transitions](#), for more details about contract transitions.

When ownership of a multi-contractor claim set is changed, the set is moved from the view of the old Owner FI to the new Owner FI. The new Owner FI becomes the new “owner” of the set and assumes responsibility for resolving the duplicate situation in the set. The old Owner FI uses the **Modify** function on the menu bar to re-assign ownership of the claim set to the other/another contractor.

FIGURE 11-6-1 SAMPLE MULTI-CONTRACTOR CLAIM SET

The system uses three fields to manage the assignment of responsibility for resolving duplicate claims in multi-contractor claim sets. By default, the system assigns the **Owner FI** field to the contractor who processed the claim with the latest processed-to-completion date. Multi-contractor claim sets appear along with all other claim sets assigned to the same Owner FI. Other contractors will not have access to these sets.

The **Responsible FI** field is used to identify the contractor who is currently responsible for a claim. This field is shown for each claim listed on the CLAIM SET SCREEN and the CLAIM DETAIL SCREEN. The **Processing FI** field is used to identify the contractor who paid the claim. This field is shown on the CLAIM DETAIL SCREEN. These fields are described below.

1.1. Owner FI Field

This field is assigned by the Duplicate Claims System to each claim set. The **Owner FI** field designates the contractor responsible for resolving the claim set.

1.2. Responsible FI Field

This field is assigned by the Duplicate Claims System to each claim in a set to identify the contractor responsible for correcting any errors in the claim and for recouping any overpayments of actual duplicate payments. The Responsible FI of the claim with the latest process-to-completion date is also assigned as the Owner FI of the set. During a contract transition, the system looks at all claims belonging to the outgoing contractor and determines if the Responsible FI field should be changed to the incoming contractor. If the claim is included in the transition plan, the system will change the Responsible FI field to the incoming contractor or to the inactive designation of FI 99. The FI 99 designation will appear on the screen in red. If the claim is not included in the transition plan, the system will leave the field unchanged. See [paragraph 5.0.](#), Resolving Claim Sets Containing Inactive FI 99 Claims, for additional information.

1.3. Processing FI Field

This field is a claim-level data element that is extracted from the HCSR. It contains the FI number of the contractor who originally processed the claim. The **Processing FI** field cannot be changed in the Duplicate Claims System.

2.0. SYSTEM FEATURES UNIQUE TO MULTI-CONTRACTOR CLAIM SETS

The layout of the data and the screens available for viewing and entering data in multi-contractor claim sets is the same as the layout of single contractor claim sets. In multi-contractor sets, though, the contractor who is designated the Owner FI can change the **Owner FI** field to designate the other contractor as the Owner FI. This process is initiated as follows:

- 2.1. The user clicks the **M**odify command on the menu bar.
- 2.2. The user selects the **Owner FI** field.
- 2.3. The system displays the FI number(s) of the other contractor(s) in the set and the user selects the contractor to be designated the new Owner FI.

This feature also requires the current Owner FI to document the contact with the contractor to which the set will be transferred and provide an explanation for why ownership of and responsibility for resolving the set are being changed. When a new Owner FI is assigned, the owner region field changes to "<to be assigned>". The new Owner FI subsequently can click on the **M**odify function, Owner Region option, and select the appropriate owner region.

A system feature unique to multi-contractor sets is the rule for changing the status of a set to Pending. In effect, the system ignores the claims in the set in which the Responsible FI is not the Owner FI. It allows an Owner FI to move a set to a Pending status if there is one

BASE claim and all of the Owner FI's claims meet the general conditions for Pending. That is, all Owner FI claims must have a dupeflag and reason code, there must be one 'Y' claim, and every 'Y' claim must have an identified recoupment amount greater than \$0.00. According to this rule, the status of a multi-contractor set may change as the Owner FI changes. For example, if the Owner FI identifies all of his/her claims as actual duplicates and enters a 'Y' in the **Dupeflag** fields, selects reason codes and enters amounts identified for recoupment, and leaves the other contractor's claim as the BASE claim, he/she can click the **UPDATE CHANGES** button and move the status to Pending. However, if the Owner FI changes the **Owner FI** field to the other contractor who has only the BASE claim, the new Owner FI will receive a set with a status of Open. According to the rules, the new Owner FI does not have actual duplicate claims with associated amounts identified for recoupment.

Another system feature unique to multi-contractor claim sets is the special logic invoked for multi-contractor appended sets. When a new claim is identified during the monthly extract as a potential duplicate of a claim in an existing set, the set is called an appended set. In appending a new claim to a set, the system applies the general rule of assigning the Owner FI to the Responsible FI of the claim with the latest PTC date if the status of the set is Open or Closed. If the status of the set is Pending or Validate, the system ignores this rule and leaves the current assignment of the Owner FI. The system also applies special logic to determine the status of multi-contractor appended sets.

The status of multi-contractor sets with an appended claim is determined as follows:

Open sets will remain Open because recoupment had not been initiated on the set prior to the new claim being appended.

Pending sets will remain Pending to allow the Owner FI to complete recoupment of actual duplicate payments prior to determining if additional research is required or if the set should be transferred to another contractor.

Validate sets will be changed to Pending to allow the Owner FI to determine if the appended claim changes the Validate situation prior to determining if additional research is required or if the set should be transferred to another contractor.

Closed sets will be changed to Open to allow the Owner FI to determine if the appended claim requires additional research or if the set should immediately be transferred to another contractor.

3.0. COORDINATION REQUIREMENTS WHEN WORKING WITH MULTI-CONTRACTOR SETS

Resolution of multi-contractor claim sets requires close coordination between the contractors involved to ensure that research efforts and resolution activities are conducted efficiently and appropriately, and in a timely manner. When researching a multi-contractor set, the Owner FI must contact the other contractor(s) involved to determine who is responsible for the duplicate payment and for recouping the overpayment(s). This contact may be in writing or by telephone. If the current Owner FI is not responsible for the duplicate payment, the Owner FI should be changed to the contractor who is responsible. Ownership of the set must not be changed to another contractor until the receiving contractor has been consulted and an explanation has been entered into the system justifying the switch.

The explanation entered into the system must contain:

- Date the other contractor was contacted
- Name and telephone number of the person making the call from the current Owner FI
- Name and telephone number of the person contacted at the contractor to which ownership of the set is being changed
- Brief explanation for the change of ownership (e.g., “This claim falls within the jurisdiction of Region 13. FI for Region 14 paid claim in error and is responsible for recoupment of the overpayment.”)

4.0. RESOLVING MULTI-CONTRACTOR CLAIM SETS

Multi-contractor claim sets are resolved in the same manner as all other claim sets in the Duplicate Claims System:

4.1. When the initial Owner FI conducts research and determines that they were responsible for the duplicate payment, the FI can initiate recoupment and resolve the claim set in accordance with the rules of resolution.

4.2. When the initial Owner FI determines that the duplicate payment belongs to a different contractor, the FI must contact the other (receiving) contractor and discuss the situation before the current Owner FI can change ownership. The initial Owner FI must document the contact and the reason for the change in set ownership. Although the initial Owner FI may enter a ‘Y’ in the **Dupeflag** field of the other contractor’s claim, it is recommended that this action be reserved for the Responsible FI of the claim. The initial Owner FI may not enter an amount identified for recoupment.

4.3. After documenting the contact and agreement to change set ownership, the initial Owner FI may change ownership to the other (receiving) contractor. Once ownership is changed in the system, the receiving contractor (the new Owner FI) can view the set, initiate recoupment action, and resolve the claim set in accordance with the rules of resolution. Multi-contractor sets must not be resolved without direct communication and coordination among the involved contractors.

4.4. If a multi-contractor set contains a BASE claim and two or more additional claims processed by different contractors, ownership must be transferred to each contractor in the set to resolve the set. Each contractor is responsible for identifying their duplicate payments, initiating recoupments, and submitting HCSR adjustments corresponding to their duplicate payments. The set cannot be resolved unless all resolution requirements have been met.

4.5. Ownership of multi-contractor sets may switch back and forth between contractors as research is conducted and determinations about jurisdictional responsibility are made. When a set changes ownership, only the current Owner FI can view the set, including all adjustments. The current Owner is never permitted to enter recoupment amounts in the other contractor’s claim. The current Owner FI is, however, permitted to flag an adjustment submitted by another contractor to facilitate resolution.

5.0. RESOLVING CLAIM SETS CONTAINING INACTIVE FI 99 CLAIMS

[Section 7](#), Mass Change Function For Contract Transitions, describes how the transition plan will determine if an outgoing contractor's claim should be transferred to the incoming contractor or to an inactive status of FI 99. If a claim in a multi-contractor set is transferred to FI 99, special logic is applied to the resolution of the set. The system will not permit a multi-contractor set to have an Owner FI of 99. Therefore, if the claim with the latest PTC date has responsible FI 99, the Owner FI will be assigned to the Responsible FI of the next latest PTC date.

The resolution of multi-contractor sets requires Owner FIs to identify at least one actual duplicate claim in the set. Special logic is applied to multi-contractor sets containing an inactive FI 99 claim. If there are no other active FIs in the set, the Owner FI can resolve the set without identifying an actual duplicate claim. In other words, if the Owner FI is the Responsible FI of one claim in the set and the other claim has a Responsible FI of 99, the Owner FI can identify both claims as non-duplicates and resolve the set to a Closed status. The Owner FI also can resolve sets containing FI 99s according to the general rules of resolution in which actual duplicates are identified, recoupments are received, and adjustments are processed.
